Tailored for: AI Engineer (agentic_ai_engineer)

Summary

Maya Chen is a third-year Bachelor of Computing Science student at the University of Technology Sydney with experience in Python development, REST APIs, and building AI prototypes. She has academic project experience creating a tool-call agent prototype and a web API using Python, SQL, and Git.

Matched skills

- Python - Team Course Planner and AI Coursework Prototype

Requirements not yet evidenced

- Two or more years of Python development
- Langflow
- LLM orchestration, RAG, or AI-agent solutions experience
- Modern AI tooling and orchestration frameworks
- Cloud infrastructure
- Terraform or Kubernetes
- Docker
- Stakeholder engagement

Education

- Bachelor of Computing Science, University of Technology Sydney (Third year)

Technical Skills

- Python, Java, SQL, REST APIs, Git, GitHub, pytest, Jupyter Notebook

Projects

- Team Course Planner: Built a small web API that stores course information and helps students check timetable clashes. Contributed to the Python service layer, SQL queries, REST endpoint design, input validation and unit tests.
- AI Coursework Prototype: Created a small tool-call agent prototype that selects local course tools and records each tool result before producing a response using Python, prompt design, tool calling, JSON, and Jupyter Notebook.

Experience

- Customer Service Assistant, Fictional retail store (Casual employment): Handled customer questions, worked with a small team during busy periods and followed written procedures.

Achievements

- Presented the Team Course Planner in a group demonstration
