Tailored for: Graduate AI Engineer (graduate_ai_engineer)

Summary

Liam Patel is a third-year Bachelor of Computing Science student at the University of Technology Sydney with a focus on AI and machine learning. He has hands-on coursework experience developing a retrieval-augmented assistant and conducting text classification studies using Python, pandas, NumPy, scikit-learn, and PyTorch basics. His technical skill set includes foundational knowledge in machine learning, NLP, embeddings, and Git version control.

Matched skills

- Python - Used in Coursework Retrieval Assistant and Text Classification Study
- NumPy - Used in NLP coursework exercises
- pandas - Used in Text Classification Study
- scikit-learn - Used in Text Classification Study
- PyTorch basics - Used in NLP coursework exercises and Text Classification Study
- LLMs - LLM API usage in Coursework Retrieval Assistant
- RAG - Coursework Retrieval Assistant built over a local collection of job descriptions
- Git - Coursework project repositories and Coursework Retrieval Assistant

Requirements not yet evidenced

- Up to two years of professional experience
- Statistics knowledge
- Agentic AI knowledge
- Domain-specific fine-tuning
- Data visualisation

Education

- Bachelor of Computing Science, University of Technology Sydney (Third year)

Technical Skills

- Languages & Frameworks: Python, PyTorch basics, Hugging Face Transformers basics, SQL
- Libraries & Data: pandas, NumPy, scikit-learn, embeddings, FAISS
- Tools & Practices: Git, Jupyter Notebook, prompt design

Projects

- Coursework Retrieval Assistant (43007 Advanced Artificial Intelligence coursework): Built a small retrieval-augmented assistant over a local collection of job descriptions using Python, embeddings, FAISS, prompt design, LLM API, and Git. Compared different prompts, inspected retrieved evidence, and documented cases where the answer was uncertain.
- Text Classification Study (Natural Language Processing coursework): Prepared a labelled text dataset, trained a baseline classifier, and compared precision and recall across two model settings using Python, pandas, NumPy, scikit-learn, PyTorch basics, Hugging Face Transformers basics, and evaluation.

Achievements & Community Involvement

- Volunteer helper at a fictional UTS AI and Data Science Society workshop; this activity is synthetic and is not a verified UTS record
